Winkio has released another version of Blizz-ABS in which you can configure the combo system using the configuration application.

Yet another new version of Blizz-ABS by Winkio. This time he has put together a configuration system very similar to RMXP's eventing system that allows users to set up combo sequences in Blizz-ABS. Since Winkio is still not completely familiar with the code of Blizz-ABS, he expects major bugs other problems, hence this version is no 2.8. Download the newest version from [here](#).
